New Training Opportunities in Occupational Health

Approved residency training in occupational medicine is offered at several institutions in the western states: In Northern California (a collaborative effort of the University of California School of Public Health at Berkeley and the School of Medicine at San Francisco), in Southern California (a collaboration of the University of California College of Medicine at Irvine and the UCLA School of Public Health), at Salt Lake City (University of Utah Medical Center) and at Tucson (University of Arizona Health Sciences Center). A new program is under review at the University of Washington School of Public Health and Community Medicine at Seattle. All of these are supported in part by the National Institute of Occupational Safety and Health through Educational Research Center grants.
